**ABSTRACT:**

CHG DATE=20040309 STATUS=O>The invention relates to a sterilisable sealing film comprising a substrate (2), a primer layer (3), and at least one extruded functional layer (6). The aim of the invention is to improve one such sterilisable sealing film in terms of the migration freedom of constituents thereof. To this end, an extruded barrier layer (4) preventing at least the migration of constituents of the filler is provided between the primer layer (3) and the extruded functional layer (6).
